

Equine Castration

Your gelding should be exercised for 20 minutes per day at the trot and/or lope for two weeks. The incision should be hosed out daily after exercise. Please call us if there is any swelling greater than softball size or if any drainage or odor is apparent. It often takes 4-6 weeks for the testosterone to leave the horses system so we do not recommend introducing your gelding in with other horses (especially mares) for this length of time
